Summary

Computer Science student skilled in **competitive programming**, **MERN stack development**, and **data science & machine learning**. Strong problem-solving abilities with experience in building scalable applications and applying analytical models to real-world challenges.

Education

Vignan's Institute of Information Technology **2022 – 2026**
B.Tech in Computer Science and Engineering (Data Science) *CGPA : 8.0*

Sri Chaitanya Junior College **2020 – 2022**
Intermediate *Percentage : 91.2*

Narayana E-Techno School **2019 – 2020**
CBSE *Percentage : 81*

Projects

Neural Narrate - AI Powered Blog Generator | *React JS, Express JS, Node JS, Mongo DB, Tailwind CSS* **Github**

- Developed a full-stack web application that enables users to generate, manage, and publish blogs using AI. Integrated Google Gemini API for automated content generation, Quill.js for rich text editing, and ImageKit for optimized image uploads.
- Built with the MERN stack and secured with JWT authentication. Designed and implemented an admin dashboard to manage blogs, drafts, comments, and analytics. Deployed on Vercel with a responsive Tailwind CSS UI.

Swiggy Clone | *React JS, Node JS, Express JS, Tailwind CSS* **Github**

- Developed a MERN-stack Swiggy-inspired food delivery platform featuring user authentication (login/register), vendor dashboard, and a UI closely resembling the original Swiggy app. Implemented role-based access for users and vendors, with secure JWT authentication and protected routes for both dashboards.
- Built RESTful APIs with Express.js and Node.js for user registration, login, product management, and vendor operations. Integrated MongoDB for storing user data, product listings, and vendor information with proper schema relationships.

Resume Analyzer and Job Matcher | *React JS, Express JS, Node JS, Tailwind CSS, Python* **Github**

- Built a full-stack web application to analyze resumes and match them with suitable job descriptions. Extracted key skills from uploaded resumes and compared with job descriptions by using python NLTK toolkit to calculate match percentages and identify skill gaps.
- Suggested relevant job roles based on extracted keywords and candidate profile. Designed a clean, professional frontend with Tailwind CSS and custom components.

Technical Skills

Languages: Python, Java, C++, HTML, CSS, JavaScript

Developer Tools: Visual Studio Code, Eclipse, Thunder Client, Git, Codeblocks

Databases: MySQL, Mongo DB

Technologies/Frameworks: Github, React JS, Node JS, Express JS, Tailwind CSS

Certifications

- Web Development (Eduskills)
- Python Essentials 1, 2 (Cisco)
- SQL for Data Science (edx)
- AI-ML (Eduskills)
